

Quick Capture V1.0

Overview

The Quick Capture Macro for Solidworks is written in VBA and is intended a one-click method for quickly exporting a jpeg capture of the current view.

Revisions

Version	Released	Author	Notes
V1.0	05/02/2022	DB	Initial Issue

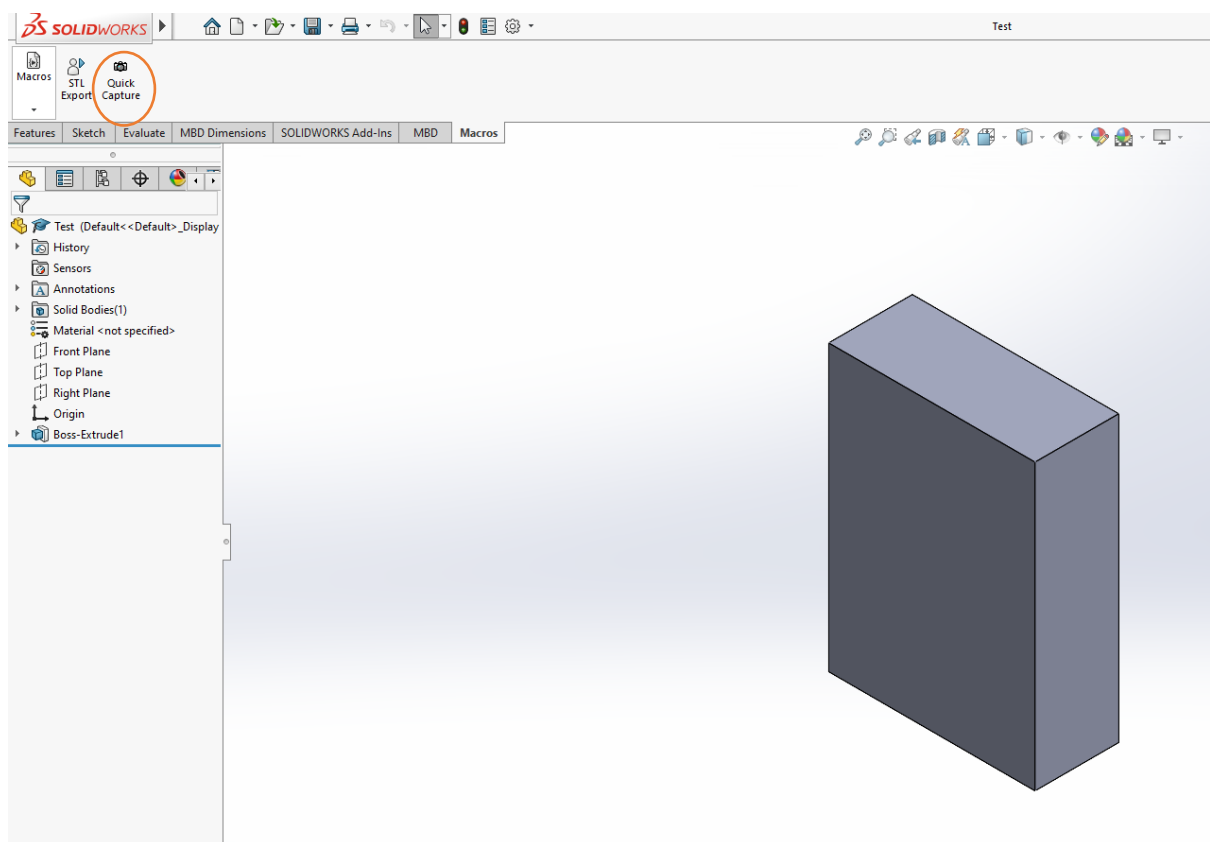

Installation

Download the latest .ZIP folder and unzip.

Assign the macro to the Solidworks tool bar. For help assigning the macro to a tool bar button follow [these](#) steps.

User guide

Run the macro by clicking the macro button on the tool bar. See above steps on how to assign a macro button.

A JPEG of the current viewpoint will be exported to the active document's directory. The exported image will take the same name as the active document followed by '_Capture_(0)'. Any subsequent exports shall be named incrementally.

Name	Date	Type	Size	Tags
Test	05/02/2022 16:43	SOLIDWORKS Part...	47 KB	
Test_Capture_(0)	05/02/2022 16:51	JPG File	97 KB	
Test_Capture_(1)	05/02/2022 16:53	JPG File	97 KB	
Test_Capture_(2)	05/02/2022 16:53	JPG File	97 KB	

If the macro runs on an active document which has never been saved, the image shall not be exported, and the following message displayed.
